

Cardiac - Other

Introduction

Welcome to the cardiac surgery urgency assessment tool for Cardiac Other (9079).

This implementation is a temporary work around replacing the old CPS tool which 'died' sooner and more completely than expected.

It is planned that a more comprehensive, user friendly, environment will be created to improve the utility and look and feel. The goal is to ensure all patients undergoing elective or urgent cardiac surgery, and soon cardiological intervention, will be scored consistently.

Prioritisation

Cardiac – Other

Procedure

Procedure

- Thoracic aortic surgery without valve repair or replacement
- ASD repair
- Myomectomy for HOCM
- Other

Other description

Appropriate timeframe

- Less than 90 days
- Less than 30 days
- Less than 10 days
- Less than 72 hours
